

PUT WINGS ON YOUR OUTBOARD with the *Supramar HYDROFOIL KIT*

Enjoy hydrofoil thrills, hydrofoil advantages and savings with the Supramar Kit, that can be easily installed on your outboard by any qualified boat dealer.

The kit fits any hull—fibre glass, wood or aluminum. The foils themselves are of fine carbon steel (and completely retractable for conventional cruising). This engineering achievement is the product of years of development. The front foil weighs approximately 100 lbs., the rear one, which supports the outboard extension, 25 lbs.

With Foils Retracted

At "flying speeds," the hull skims along a full foot above the surface. This greatly reduces drag, increases speed and means far more mileage per tankful of gas. And it offers a smoother ride and better overall stability.

THE BUILT-IN SAFETY FACTOR:

Front foil is attached by shearpin for safety and releases on contact with immovable object. When foils retract, the hull settles into normal (displacement) floating position. This "breaking action" smoothly decelerates the motion of the boat.

SUPRAMAR OUTBOARD HYDROFOIL UNIT

for pleasure craft

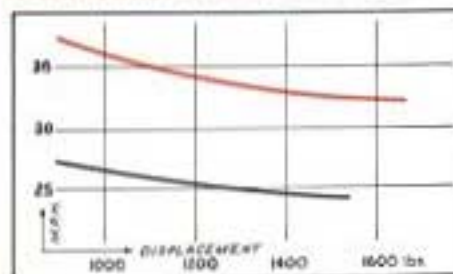

Patents approved and pending in the U. S., Canada, and all major countries. Soon to be available at licensed marine dealers.

SPEED OF OUTBOARDS WITH & WITHOUT SUPRAMAR HYDROFOILS

The graph shows a comparison of speeds of identical boats powered by 40HP engines with foils and without foils. Note impressive HYDROFOIL performance.

BASIC FACTS ABOUT **HYDROFOILS** "The boats that fly"

Hydrofoil means "water-wing." And that's just what it is. Like aircraft wings, the foils develop lift from the forward motion of the craft, at cruising speeds, raising the hull completely out of the water.

And that creates a whole series of tremendous advantages over conventional displacement boats: Hull friction is reduced from 100% to around 6%. Speed is enormously increased. Fuel costs drop dramatically. Distance traveled

per tankful of fuel is greatly lengthened. And riding characteristics are vastly improved, providing much smoother passages.

Hydrofoil boats are extremely maneuverable...even at high speeds, and take white water and the rough chop of harbors and bays beautifully...maintaining their high speeds under conditions that would force conventional boats to reduce speed drastically.

*In regular service 1964 New York World's Fair
American Hydrofoil Inc. fast boat*

Supramar is the leading international organization specializing in the development, design, and licensing of Hydrofoil water transportation. Twenty years of research have gone into the perfection of Supramar products.

In addition to Supramar pleasure craft, Supramar passenger ferries and transports are currently in regular operation in: The United States, Italy, Switzerland, Germany, Norway, Yugoslavia, Venezuela, Japan, France, Greece, Denmark, The Caribbean, Sweden, Israel, Sicily, The Philippines and Hong Kong.
